Welcome Address

Physical and mental illnesses interact mutually and share common risk factors with not only additive but also synergistic effects.

Comorbidity is a complex event for its numerous clinical and socio-environmental implications. Up to 25% of patients with chronic illness also suffer from comorbid mental disorders, even higher rates of comorbidity are seen for specific conditions (e.g. cancer, neurological disorders). Doctors tend

to concentrate on symptoms and organs, underestimating the importance of mental health problems, especially when they accompany a serious physical illness. This is largely in the belief that the mental health issues, as simple corollaries of the major disease, are destined to disappear with the improvement of the physical disease.

On the other hand, psychiatrists, physicians for psychosomatic medicine and psychotherapy, and psychologists may be similarly reluctant to deal with medical comorbidities in their patients.

Such poor attention paid to the interplay between physical and mental disorders impacts negatively in terms of health and social costs, because of intensive, excessive or inappropriate use of resources as well as indirect costs (decrease in productivity, disability, reduced quality of life). These costs would be avoidable with the implementation of integrate and innovative interventions addressing effectively bio-psycho-social complexity. Such is indeed one of the absolute future priorities in health management worldwide.

We wish that this Conference - that has received scientific contributions from 45 different countries in the world - might not only be an highly fruitful experience, but also a fundamental occasion to increasing integration and innovation in the field of Psychosomatic Medicine to the benefit of the population's health and wellbeing.

Welcome to Verona!

21st century psychiatry: acknowledging complexity while avoiding defeatism Mario Maj (Naples, Italy)

President, European Psychiatric Association (2003-2004); President, World Psychiatric Association (2008-2011); Founder and Editor of World Psychiatry, official journal of the WPA (impact factor: 26.561); President, Italian Society of Biological Psychiatry (1991-present)

The current perception of a crisis in our discipline has been in part generated by the identification of mainstream psychiatry with the neo-kraepelinian paradigm. The recent crisis of confidence in that paradigm has expanded to some extent into a crisis of confidence in the discipline as a whole. Here I list a series of new principles that are emerging within the current period of "extraordinary science" following the crisis of the neo-kraepelinian paradigm. The domain of psychiatry consists of patterns of intercorrelated reported experiences and observed behaviours which allow professionals to make non-trivial inferences about further course and management (so-called predictive validity or clinical utility). There is no assumption today that these patterns of mental disorder are all "natural kinds" (i.e., discrete entities marking a real division in nature). Our current diagnostic systems are instead likely to be a collection of intrinsically different constructs. The notion that these patterns are independent from each other has proved to be invalid: "comorbidity" is not an artefact of our current diagnostic systems; it is an intrinsic feature of psychopathology. That there is a clear boundary between the normal and the sick is also not supported by current evidence. Research on virtually all the main patterns of mental disorder points to a continuity between the full diagnosable forms and some experiences, behaviours or traits which appear to be relatively common in the general population. The threshold for the clinical diagnosis has to be drawn arbitrarily mostly on the basis of severity or functional impairment, and validated on the basis of its predictive value in terms of outcomes and choice of treatment. A simple deterministic etiological model, such as that applicable to infectious diseases, cannot be extended to mental disorders, which are instead the product of the complex interaction of a variety of vulnerability and protective factors. Rather than searching for disorder-specific genetic or environmental causes, our task is today to identify "constellations" of vulnerability and protective factors which are associated significantly with the various patterns of mental disorder. The idea of a common final pathogenetic pathway leading to each pattern of mental disorder is also regarded today as implausible. The relationship between a given pattern of mental disorder and the response to a given treatment is only probabilistic. All psychiatric therapies do not work in a vacuum, but within a social context, which accounts for a significant proportion of the variance of outcomes. Users should be regularly involved in decisions concerning treatment, as well as in the assessment of outcomes.

CARUS MASTER CLASS TRAUMA-INFORMED CARE INTERVENTIONS

Clare Pain

MD, Associate Professor, Department of Psychiatry, University of Toronto; Director of the Psychological Trauma Program, Mount Sinai Hospital, Toronto, Canada

Unresolved psychological trauma can affect an individual's mental, physical, social, and spiritual well-being. In spite of these effects, it is not unusual for the impact of trauma to be hidden or unacknowledged. As a result, health care providers can feel confused and uncertain when working with trauma survivors, which may leave trauma survivors at risk of not receiving the care they need, even with a clinician's best intentions.

Trauma-informed care provides a framework that incorporates an understanding of the individual. It promotes sensitivity to engagement so as to ensure survivors receive care appropriate and responsive to their needs; delivered in a manner that facilitates acceptance of the care being offered.

This interactional workshop will address the impact of trauma, and the identification and management of patients suffering from symptoms and problems as a result of unresolved traumatic experiences. Clinical examples, demonstrations of techniques and strategies for working with trauma survivors will bring the theoretical material to life and illustrate the applied principles in practice. Participants are invited to bring clinical cases or submit clinical cases in advance for discussion.

CARUS MASTER CLASS GROUP INTERVENTIONS FOR STAFF

Molyn Leszcz

M.D., FRCPC, DFAGPA, Professor, Department of Psychiatry University of Toronto, Sinai Health System; President-Elect, American Group Psychotherapy Association

Medical and nursing staff working in acute care hospitals experience high levels of psychological stress, and vulnerability to burnout through exposure to adverse clinical situations and systemic threats and challenges.

An overarching objective in contemporary hospital care should be creating a culture that aligns regard for the wellbeing of care providers with the care providers' care for patients, recognizing that the best clinical care is provided in environments in which the best psychological care is provided to an engaged staff.

Beginning with a focus on responding to the impact of SARS on the staff at Mount Sinai Hospital, a University of Toronto Academic Hospital, through to the present, the workshop will address the theory and practice of interventions that have impacted staff resilience, improved coping and adaptation, improvement of mental health literacy, reducing mental health stigma, managing stress and supported psychological safety in the workplace. Applications from micro levels with regard to group interventions for staff to macro levels with regard to hospital culture will be illustrated. Alignment with the National Commission on Mental Health Standards for Psychological Safety in the Workplace will also be discussed.

Participants in the workshop will be asked to discuss their own experiences and perspectives in supporting their health care colleagues in the face of adversity and psychological stress.

THURSDAY 28 JUNE 8:30 - 10:40

CARUS RESEARCH MASTER CLASS RESEARCH METHODS AND TARGETS OF PSYCHOSOMATIC RESEARCH

Giovanni Andrea Fava

Department of Psychology, University of Bologna, Bologna, Italy and Department of Psychiatry, State University of New York at Buffalo, Buffalo, New York

The aim of the masterclass is to discuss the main critical issues that are concerned with psychosomatic research, based on the lecturer's extensive experience with Psychotherapy and Psychosomatics. The following issues will be covered: 1) development of a psychosomatic hypothesis; 2) formulation of a research protocol; 3) choice of assessment instruments, with particular reference to clinimetric principles and the Diagnostic Criteria for Psychosomatic Research; 4) writing of the paper; 5) submission of the paper to a journal. The format is interactive, with opportunities for questions and requests for clarification.

CARUS MASTER CLASS PHYSICAL AND MENTAL HEALTH IN CHRONIC ILLNESS

Sir Graham Thornicroft

Centre for Global Mental Health, Institute of Psychiatry, Psychology and Neuroscience, King's College London, De Crespigny Park, London SE5 8AF

Presenter: Sir Graham Thornicroft is Professor of Community Psychiatry at the Institute of Psychiatry, King's College London. He is a Consultant Psychiatrist working in an Early Intervention community mental health team in South London. His areas of expertise include: mental health needs assessment, the development of new outcome scales, cost-effectiveness evaluation of mental health treatments, stigma and discrimination, the development of community-based mental health services, and global mental health. He has published 30 books and over 500 peer-reviewed scientific papers.

Summary of presentation: This masterclass will address: • The co-occurrence of mental and physical ill health • The concept of syndemics • Evidence of premature mortality among people with mental illness • Evidence of neglect of physical health problems among people with mental illness • The contributions of stigma towards these problems • Actions that are needed at the clinical level to address such disparities • The evidence that integrated care can provide a better approach to the care of people with co/multi-morbid conditions

ALISON CREED AWARD MASTER CLASS CONDUCTING RANDOMIZED, CONTROLLED INTERVENTION TRIALS IN PSYCHOSOMATIC MEDICINE

Arthur J. Barsky

M.D., Professor of Psychiatry at Harvard Medical School and the Vice Chair for Academic Affairs in the Department of Psychiatry at the Brigham and Women's Hospital in Boston, USA

Randomized, controlled clinical trials are considered the gold standard for establishing the efficacy of a therapeutic intervention. This workshop will use a short description of one such trial as a springboard to a broader discussion of the design, conduct, and reporting of clinical research. Most of the time will be devoted to interaction and discussion among the participants. The discussion may consider how to think through and formulate testable hypotheses; how to go about designing a study to test the hypotheses; how study design influences the choice of methods and procedures, and the selection of the study instruments; thinking through the basics of data analysis; and how to write up and publish studies. If participants are interested, we can also discuss the grant application process and the search for funding.

I will begin the session by summarizing a recently completed randomized, controlled intervention trial (Fallon BF, Ahern, DK, Pavlicova M, Skritskya N, Barsky AJ. A randomized controlled trial of medication and cognitive-behavioral therapy for hypochondriasis. American Journal of Psychiatry 2017; 174: 756-764). This clinical trial compared hypochondriacal volunteers randomized to fluoxetine, cognitive behavior therapy, combined treatment with both, or pill placebo. They were carefully screened to meet eligibility criteria, and assessed at baseline, 12 weeks and 24 weeks after treatment. An intent-to-treat analytic design was used. The results indicated that fluoxetine but not CBT was significantly effective in reducing hypochondriacal symptoms. Joint treatment provided a small incremental benefit. It would be helpful background for our workshop if the participants would submit several topics or specific questions they would like to discuss. In addition, a brief summary of studies that they may have conducted or are currently planning would be helpful to have in advance.

CONSULTATION LIAISON PSYCHIATRY: HOW TO APPROACH DIFFERENT MEDICAL SPECIALISTS; ONE SIZE DOES NOT FIT ALL

K-J. Nauta, B. Broekman, A. Schade, BFP Broekman

Department of Psychiatry VU Medical Centre, Amsterdam, The Netherlands

AIM: Doctors of various medical specialisms can make different clinical judgements about psychosocial and psychiatric problems in their patients, based on their own interests, experience and attitude towards psychiatric care. As a consequence, various medical specialists may have different expectations and needs of Consultation Liaison psychiatrists. Understanding these differences is important for improving effectiveness of psychiatric consultation, consultee satisfaction and integrative care of the patient.

METHODS: In this interactive workshop we will first provide a brief outline of our conceptual approach towards Consultation Liaison Psychiatry. This will be followed by a discussion on differences in clinical judgments and professional attitudes between the various medical specialists, supported by results of a descriptive study on attitudes of non-psychiatry doctors towards mental health problems and liaison psychiatry services in our hospital. At the end of the workshop, we will explain how Consultation Liaison Psychiatry can be made more effective by connecting to the different attitudes of different specialists.

Participants will practice with developing treatment plans for different consultation requests from doctors of various medical specialisms. In the plenary discussion there will be room for sharing insights and ideas. The workshop will be concluded with advice and recommendations for practice.

RESULTS: After completing this 2 hour workshop, the participant will be able to:

- Recognize and understand different needs and expectations of various medical specialists that are relevant for psychiatrists working in Consultation Liaison Psychiatry.
- Improve his/her effectiveness of the psychiatric consultation by adapting his/her communication style in concordance with doctors of diverse medical specialisms and being able to provide a customized treatment plan

HOW TO UNDERSTAND THE PSYCHODYNAMIC ASPECTS OF THE CONSULTATION (SAME CASE - DIFFERENT VIEWS) - AN EAPM-ACLP WORKSHOP

Kemuel Philbrick¹, Friedrich Stiefel², Manfred Beutel³, Wolfgang Söllner⁴

¹Mayo Clinic, Rochester MN, USA; ²Dept. of Liaison Psychiatry, University of Lausanne, Switzerland; ³Dept. of Psychosomatic Medicine and Psychotherapy, Mainz University, Germany; ⁴ Dept. of Psychosomatic Medicine and Psychotherapy, Paracelsus Medical University, Nuremberg General Hospital, Germany

AIMS: The workshop will address two questions:

- 1) How does dynamically informed consultation provide added value for patients and colleagues?
- 2) How can we cultivate the development of this skill set in trainees?

INTRODUCTION: The EAPM and APM both support training C-L psychiatrists and psychosomatists to carry out psychodynamically-informed assessments of how patients unconsciously shape the meaning of their illness and the challenge to press on in life. Faced with multiple competing pressures to efficiently care for medical patients, C-L psychiatrists and allied health professionals will better meet the needs of their patients if they are equipped to listen and think through the whole meaning of the patient's illness and suffering.

METHODS: We will address these issues through presentation and discussion of two cases that illustrate the advantage provided by dynamically informed consultation. A panel of experienced and analytically trained C-L experts will show how a psychodynamic understanding of powerful emotional responses in (a) the patient and his or her relatives, (b) the ward's medical team, and (c) the psychiatric consultant, enables the examination of transference and counter-transference phenomena and underlying unconscious conflicts.

RESULTS: The commentary will illustrate how trainees can be encouraged to cultivate they to integrate dynamic formulation into their consultative work.

CONCLUSIONS: Presenting actual patients, drawing on the deep experience of the panel members to comment, and then inviting audience participation in further reflection on the challenges of working with the medically ill who have significant psychodynamic contributions to their behaviour will strengthen the ability of all participants to bring these skills to bear on their daily clinical work.

Getting your research published is essential in any scientific career. However, often this is easier said than done. To get your first academic paper into print may seem like an insurmountable task.

In this interactive workshop you will get first hand tips from the editor and publisher of the Journal of Psychosomatic Research, the official journal of the EAPM, on how to increase your chances to get your paper published.

Target audience: PhD students, early career scientists

By attending you will:

- Learn how to choose an appropriate journal for your research
- Understand what it takes to submit a high quality paper
- Appreciate the importance of writing an excellent abstract
- Improve your ability to write clearly
- Learn how to deal with rejection constructively

You will leave the workshop with improved skills and strategies for writing up and submitting your research for publication.

WORKSHOP ON

PATIENTS WITH A SEVERE, TREATMENT-RESISTANT CONVERSION DISORDER: HOW TO MOVE ON?

Lineke Tak⁽¹⁾ - Babette de Graeff-Meeder⁽²⁾, Mirte Hulscher-Ruks⁽²⁾

Specialist Center for Somatic Symptom Disorder, Dimence, Deventer, the Netherlands⁽¹⁾ - Altrecht Center for Psychosomatics, Zeist, the Netherlands⁽²⁾

Aims: This interactive workshop teaches the participants how to recognize and look at treatment options for patients with severe, therapy-resistant Conversion Disorder (Functional Neurological Symptom Disorder). Participants will learn how to distinguish between Conversion Disorder and Factitious Disorder, will learn about treatment guidelines for Conversion Disorder and experimental treatment options for severe, therapy-resistant Conversion Disorder with elements of Adolescent Mentalization-based Integrative Treatment (AMBIT).

Methods: In this workshop, we will address the (scientific) history of treatment options for Conversion Disorder. Next, we will explore case studies beyond treatment guidelines, in interaction with the participants: what would be your next step and would AMBIT principles be helpful? Theory: scientifically-based presentation. Practice: case-discussion of patients with severe therapy-resistant Conversion Disorder with participation of the public. Discussing cases, at every next step the question will be asked: 'what would you do now?'. Thereafter, taken treatment steps and effectiveness of these steps, will be discussed.

Results: Conversion disorder has a long history in medicine and is now classified under the Somatic Symptom Disorder and related disorders in DSM 5 (APA, 2013). Treatment consists of physical therapy, psychotherapy, hypnosis and multidisciplinary treatment. However, there is a group patients with Conversion Disorder, that can be referred to as therapy-resistant. Within this group, treatment seems to make symptoms even worse: patients get wheelchair-bound, cannot get out of bed and/or are in need of nasal tube feeding or urinary catheters. Despite the severe symptoms and suffering, they do not get the help that is needed and may end up with primary care only. In this group, we can see a lot of powerlessness within patient, support system and also in professional caregivers. No one seems to get hold of the situation. That makes caregivers often think of a factitious disorder. Using AMBIT and making a 'disintegration grid' may help in those situations with hyper- or hypomentalization, as often seen in patients with therapy-resistant Conversion Disorder and their caregivers.

Conclusions: There are no guidelines for treating the group of patients with Conversion Disorder, who seem treatment-resistant. It is very important to give holding to patients who are simultaneously treated by several specialists. Adult psychiatry may profit from AMBIT when treating those patients.

RESEARCH GROUP MEETING ON EURONET-SOMA

Chair: Bernd Löwe, Hamburg

The EURONET-SOMA research group (full title: "European Network to improve diagnostic, treatment and health care for patients with persistent somatic symptoms") brings together experts in the field of persistent somatic symptoms from approx. 20 countries across Europe.

The overall aim of the EURONET-SOMA research group is to improve care for patients with persistent somatic symptoms across Europe in all fields of medicine. Therefore, the EURONET-SOMA group aims to contribute to a common understanding of the terminology, conceptualization and management of persistent somatic symptoms. In the longer term, we hope to transfer knowledge regarding persistent somatic symptoms between different medical disciplines and clinical psychology, as well as from research into clinical practice to make diagnostic procedures, treatment solutions and outcomes more comparable across Europe.

After four successful and rewarding meetings in Hamburg, Barcelona and Riga, the 5th meeting of the EURONET-SOMA research group will be held at the EAPM meeting in Verona. The meeting of the research group at the EAPM meeting in Verona is open to all participants of the conference.

SPECIAL INTEREST GROUPS DETAILS

A Special Interest Group is the possibility for members who are especially interested in one or more particular aspects of consultation-liaison psychiatry and psychosomatic medicine, to gather in an informal group to discuss issues, cases, pharmaceuticals, and training.

28 June from 8:00 to 19:30
29 June from 8:00 to 18:30
30 June from 8:00 to 14:00

ACCREDITATION

The Conference has been accredited by the European Accreditation Council for Continuing Medical Education (EACCME®) with **14 EUROPEAN CME CREDITS** (ECMEC®s). Each medical specialist should claim only those hours of credit that he/she actually spent in the educational activity.

Each participant can only receive the number of credits he/she is entitled to according to his/her actual participation at the event once he/she has completed the feedback form. In order to help you issue individual certificates to each participants, please find below the breakdown of ECMEC®s per day:

27.06.2018 - 7,00

28.06.2018 - 3,00

29.06.2018 - 3,00

30.06.2018 - 1,00

The EACCME® awards ECMEC®s on the basis of 1 ECMEC® for one hour of CME with a maximum of 8 ECMEC®s per day.

In order to have Plenary Room training hours recognised, the barcode on the electronic badge must be read - for which the individual participant is responsible - by the electronic readers at the entrance and exit to Plenary Room.

In order to have The Master Classes training hours recognised, participants will be requested to sign their presence at the entrance and at the exit of each room.

TECHNICAL HELP & MEDIA CHECK

A technician will help to transfer your presentation into the computer in each room. After completing the transfer, the technician performs a quick run of the presentation, so the speaker can check whether the presentation runs correctly, and all parts of the presentation are copied. The use of a personal laptop for presentations is not allowed. Please remember to bring your presentation on a CD/USB memory stick.

GUIDELINES FOR SYMPOSIUM AND ORAL PRESENTATIONS SPEAKERS

Symposium Sessions are 90 minutes long (4 or 5 presentations for each Symposium). Every presenter has **approximately 15 minutes for oral presentation plus 3 minutes for discussion.**

Oral Communication Sessions are 60 minutes long (4 presentations for each Topic). Every presenter has approximately 15 minutes for oral presentation and discussion. The supported software for presentation is PowerPoint.

Save the slides and videos used in your presentation on your CD/USB memory stick.

SANTA MARTA UNIVERSITY BUILDING - Via Cantarane, 24

The University Site of Santa Marta is located in a huge complex of military architecture, originally used for the production and storage of bread, grain and other troop rations. A permanent exhibition in the former bakery covers the history of the building and its relations with the city, with the further dimension of how soldiers were fed.

GALA DINNER - 29 June 2018

PALAZZO E GIARDINO GIUSTI - Via Giardino Giusti, 2

Nature, art, history have made Giardino Giusti famous worldwide. Created at the end of the fifteenth century, the Garden took its present layout in 1570 thanks to the work of Agostino Giusti, Knight of the Venetian Republic and Gentleman at the Court of the Grand Duke of Tuscany.

Visited and celebrated over the centuries by eminent figures of history and culture (like Cosimo De' Medici, De Brosses, Addison, the Emperor Joseph II, Goethe, Mozart, Charles Felix of Savoy, Suarez, and Gabriel

Faure), the garden, with its adjoining 15th-century palace, is today an urban complex of great interest and beauty. The internal halls of the palace were decorated and frescoed over the centuries: today we can admire the remarkable ceilings by Dorigny and Lorenzi, a student of Tiepolo, as well as frescoes by Farinati.

The noble floor is presently used as a museum with furniture of the Giusti family of the 1880 - 1920 period and a collection of Roman and Renaissance stones which is presently being rearranged and restored, coming from the Venetian Molin family, dispersed with the arrival of Napoleon.

During the Gala Dinner evening, music performance by:

DIVERTIMENTO MUSICALE

is a musical ensemble formed in 1990 by Prof. Claudio Bortolomai with the purpose of performing the wide repertoire of this music style and similar musical works like Serenades, Notturmo and Tafel Music.

The "Divertimento" is a soft and gentle chamber music that used to be played in the European courts as social entertainment.

This kind of music is usually performed open-air, in the gardens of the castles and mansion-houses and therefore these compositions often contain allegories of the natural environment.

During the Conference, performance by:

FÒOV DANCE COMPANY

Fòov Dance Company is a Lucia Miriam Salgarollo choreographer's working and research group, in Verona. The areas of interest are: performing and visual arts (dance, photography and video).
