

High-throughput MS-based proteomics and metabolomics: from cells to clinic

NOVARA | 25 June 2018

Preliminary program:

**Abstract deadline extended to 15 May
Registration deadline: 20 May**

A multi-omics population approach for understanding the aging mouse liver

Evan G. Williams - Institute of Molecular Systems Biology of ETH

Metabolomic approach to validate a novel mitochondrial regulator

Nico Mitro & Donatella Caruso, Università degli Studi di Milano

Metabolomics applications in biomedical research

Tomáš Čajka - Institute of Physiology CAS, NIH West Coast Metabolomics

The Key to Big Biobanks: High Throughput Proteome Analysis of >100

Colon Cancer FFPE Tissue Samples

Jan Muntel - Biognosys AG

Challenges in biomarker validation for bladder cancer monitoring

Jerome Zoidakis - Biomedical Research Foundation, Ac. of Athens

MALDI-MS Imaging of glomerular diseases: from the research to the clinical laboratory?

Andrew Smith & Fulvio Magni – Università di Milano Bicocca

*A target fishing and proteomic approach to study in vitro the effect of a new drug on *M. tuberculosis**

Marcello Manfredi & Emilio Marengo - Univ. del Piemonte Orientale

Selected Oral presentations

- Free for students, PhD students and young researcher (under 35)
- Available 5 fellowships from the Divisione di Spettrometria di Massa
- Two poster prizes of 300 Euro
- Oral presentation and poster
