Master
A.A. 2015-2016

Motor Learning and sport excellence

Docente
Paola Cesari

Objectives

Knowing the fundamental theories sustaining the possibility to reveal physical markers able to predict the talent in sport.

Outline

Expert brains: correlations between the neural activation and elite sport ability in action prediction and action anticipation in sport.

Expert perceptions: the ability to perceive and elaborate relevant information from a sport context as a marker for defining sport talents.

Expert bodies (1): the development of conditional ability in elite athletes

Expert bodies (2): the body structure and sport specific correlations.

Final Examination

Oral presentation of a project selected by the student

Bibliography

Scientific Articles.
